

Digital Asset!!!!

A non-tangible asset that is created, traded,
and stored in a digital format.

What is Coin?

Coins are a type of crypto asset that is native to their respective blockchain.
(like normal paper money)

What is Token?

Tokens are also a type of crypto asset created on existing blockchains that already have a native currency.

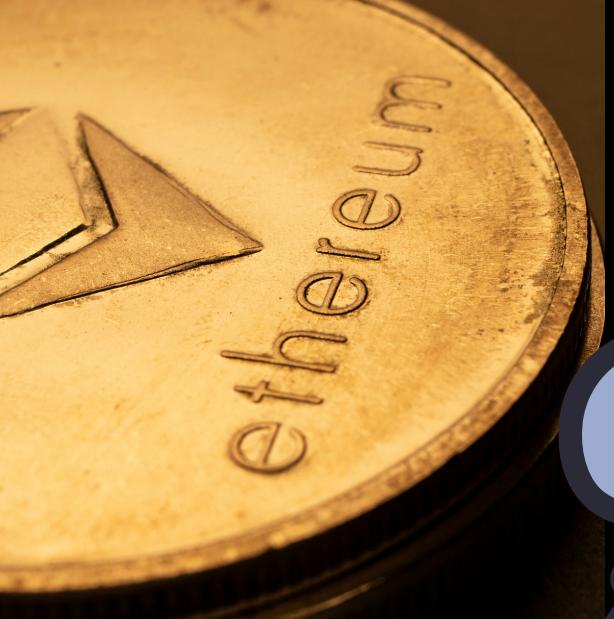

Differentiations

COIN

1. Have a native blockchain (operate on their independent blockchain networks).
2. Have rules and protocol (consensus mechanism).
3. Bitcoin, Ethereum

TOKEN

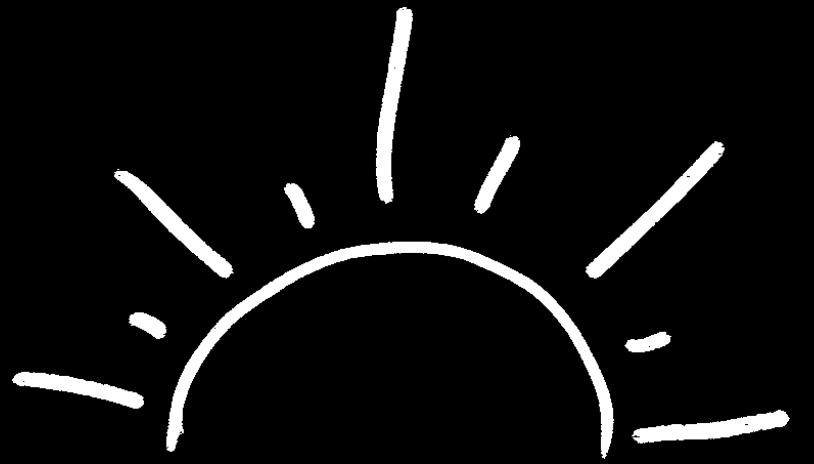

1. Works on existing blockchain.
2. Have multiple purposes.
3. Uses smart contract.
4. NFT, BNB.

TOKEN

COIN

There have 4 types of
token

DeFi Token

DeFi tokens are designed to represent ownership in a decentralized finance application or platform. These tokens may be used for staking, liquidity provision, lending.

Governance Token

These tokens are used to give holders a say in the decision-making process of a specific blockchain platform, such as voting on proposals or changes to the protocol.

NFT

These tokens represent unique digital assets, such as art, music, or collectibles, that are verified on a blockchain for authenticity and ownership.

Security Token

These tokens represent ownership in an asset, such as stocks, real estate, or other financial instruments.
